

VSD TRACEABILITY PROCESS

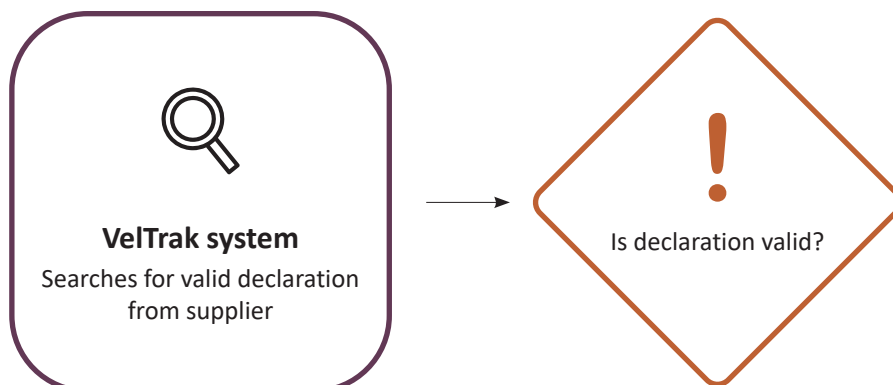

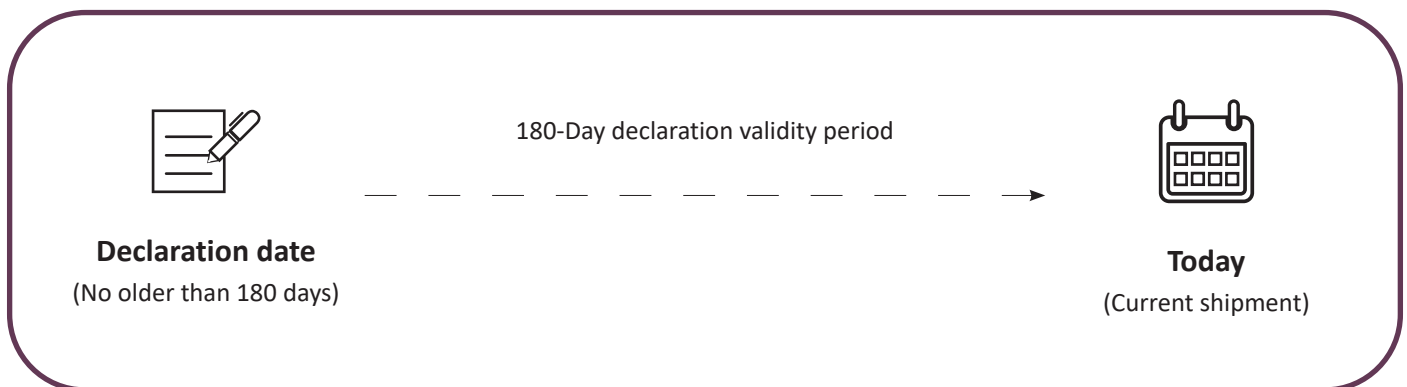

Understanding the new system: Step-by-step visual guide

1. Buyer scans product tags

Process starts here: The buyer initiates the VSD process by scanning product tags into a scan file.

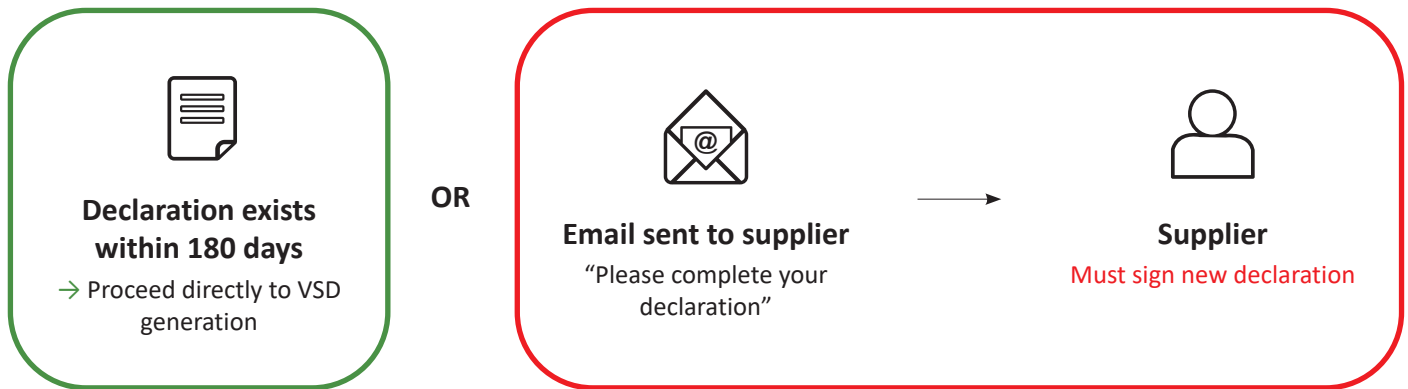

2. VelTrak checks 180-day declaration window

3. System decision: Two possible paths

✓ **Valid declaration found**

✗ **No valid declaration**

4. VSD document generation

VSD = Two combined components

Each shipment gets its own unique VSD, but the declaration component can be reused for 180 days

5. VSD ready for shipment

Key benefits of new system:

Reduced admin: Farmers sign once per 180 days

Faster processing: Automatic VSD generation when declaration is valid

Complete traceability: Every shipment still has unique identification
